## Pronomic lifting trolleys still going strong

Metsä Tissue has used ergonomic lifting trolleys from Pronomic in many years.

*" - We still use a Pronomic lifting trolley from 1997 that works really well, says Anders Sjögren, Process Engineer Converting. In recent years we have only had to order one spare part for it and Pronomics spare parts remains compatible despite the age of the lifting trolleys!"*

When Metsä Tissue invested in a new machine in the production arose the need of a lifting trolley that could handle rolls with weight

130 kg and with a length of 1300 mm.

*" - We invested in a new Lift & Drive 225P with a customized prong for long and heavy rollers. The first our operators tested was the risk of tipping and it was non-existent! says Anders Sjögren.*

*- The lifting trolley solution with the safety clutch is very good and that is what we have been missing when we have tested lifting trolleys from other suppliers. We are very pleased with Pronomics products! concludes Anders Sjögren."*
